

Vapour extraction plant for force ventilation beds

Low odour and low VOC beds close to targets, uncovered

Processed crushed concrete stockpile

Partially treated materials with low odour and VOC partially covered

Covered area for storage and processing of highly odourous materials

Uncovered treated soil beds

Mobile dust supressing unit

Double skinned tanks for storage of non-treatable liquids prior to removal from site

Bunded fuel storage tank

Open lagoon for non-odourous liquids

Covered lagoon for odourous liquids

Odourous or high VOC content beds covered with HDPE covers

Soil Under Treatment in Covered Windrows (Odourous or High VOC Content Beds Covered with HDPE Covers)

A10

Minimal areas of concrete broken out before excavation

Working Face of Excavation

General site rubble from surface for processing

To M11

Covered Excavation Faces to Minimise Odour Release (HDPE Covers Over Odourous Excavation Faces)

Main Excavation with Validated Base
